

Why is the Media Covering Up Brett Sutton's Vaccine Adverse Event Cover Up

6 April 2021: 3.33pm

Australian lawyer and corruption whistleblower "Peter Little" (Graeme Little Ne Peter POPE), and his courageous team, are determined to see this "scamdemic" uncovered, before any more preventable deaths and adverse reactions occur.

A series of five official Corruption Complaints name and shame major players in the corporate, treasonous Federal and state governments, with their historic push to experimentally vaccinate all Australians with their over-marketed, patented coronavirus vaccines - see <https://chasetruth.club/corruption-within-australian-public-health-5/>.

As part of the Vaccine Hesitancy Week rolling campaign, the mainstream media is still strangely silent in reporting a disturbing rise in Covid-19 vaccine adverse reactions, and sick leave required, which are detailed in the last three Corruption Complaints lodged with Victoria's Independent Broad-Based Anti-Corruption Commission since 26 March 2021.

These Corruption Complaints implicate the major players regulating Australia's public health system in an elaborate collaboration to acquiesce with Victoria's blatant disregard of fundamental adverse event reporting requirements.

In particular, Victoria led by Chief Health Officer, Professor Brett Sutton, is the only mainland State which has failed to survey its vaccine recipients, an imperative for experimental shots under the National Covid-19 active vaccine surveillance system, which reports weekly each Wednesday at www.ausvaxsafety.org.au.

Currently during Vaccine Hesitancy Week 3, Peter Little and his group of researchers and supporters are meeting every morning at 11:11 am at The Age building opposite Southern Cross Station. These official Working Party sessions are focused upon "Corruption Complaint" education of the media, regulators, politicians, police, GP rollout doctors/nurses, businesses and the members of the public.

The five Corruption complaints have been served upon many of the key health regulators, Major Hospitals, Vaccine rollout centres, scientific institutions and media outlets.

The three recent Corruption complaints focus exclusively on the cover up of Victoria's Covid-19 vaccine adverse events required under the AusVaxSafety Surveillance System.

Last week, the Anti-Corruption team's visits included the Corruption Commission at 459 Collins Street, CSL Broadmeadows, Royal Women's Hospital, Royal Melbourne Hospital, Peter McCallum, Peter Doherty Institute, and Melbourne University's Trinity College, the latter mandating vaccinations for all their students and faculty staff.

The team also paid a solemn visit to the Royal Exhibition Building, operated by St Vincent's Hospital, which has been transformed into a live vaccine hub, distressing many of Peter's supporters who likened it to a cattle yard. Other educational visits took place to the National Health and Medical Research Council, the Convention Centre, operated by Royal Melbourne Hospital, and to the Australian Federal Police seeking whistleblower protection.

Tirelessly working around the clock, Peter and his supporters also attended Parliament House, followed by a disappointing visit to the Australian Health Practitioner Regulation Agency, which ignored the complaints, and even locked down the entire building headquarters at 111 Bourke Street, Melbourne.

Many Victorian Police Officers have engaged with the team during these peaceful interaction visits, and have been thankful for the education about the exponential increase in the sick leave required after Pfizer's Cominarty vaccination. Despite Victoria's cover-up, a massive 22.4% of Pfizer dose two recipients were unable to work, compared to a very high 4.3% after the first Pfizer. A frightening 25% of Dose One AstraZeneca recipients surveyed required sick leave, without including Victoria's plight.

Some of the notables mentioned in these official corruption complaints include Professor Brendan Murphy, Secretary of the Department of Health, Professor Paul Kelly, Australian Chief Medical Officer, Professor Brett Sutton, Victorian Chief Health Officer, Martin Foley MP Victorian Health Minister, Adjunct Professor John Skeritt, Deputy Secretary, Health Products Regulation Group, which includes Therapeutic Goods Administration.

Annexure A - AusVaxSafety Surveillance System - 21 March 2021

COVID-19 vaccine safety surveillance

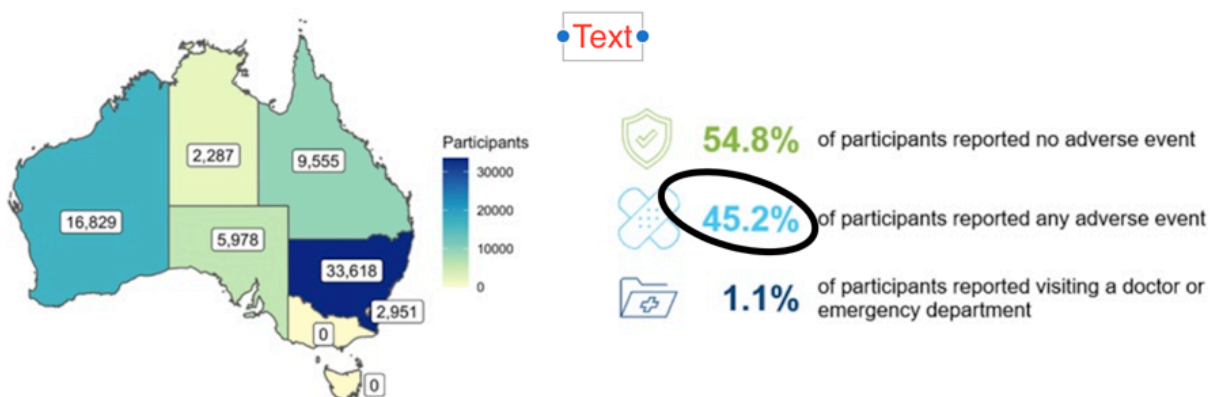

The national roll-out of COVID-19 vaccines commenced on 22 February 2021, and AusVaxSafety is conducting active vaccine safety surveillance of the vaccines in use. The vaccines currently being supplied are Comirnaty BNT162b2 (mRNA), sponsored by Pfizer Australia Pty Ltd, and COVID-19 Vaccine AstraZeneca, sponsored by AstraZeneca.

Surveillance data have been provided by Vaxtracker and SmartVax based on surveys sent on Day 3 after the vaccination, and data presented here are from surveys received up to 21 March 2021. These data are updated weekly.

As at 21 March 2021

NO SAFETY SIGNAL DETECTED

105,585 surveys sent Australia-wide
71,218 participants (67.5% response rate)

Australian Capital Territory, New South Wales, Northern Territory, Queensland, South Australia and Western Australia are currently participating in AusVaxSafety COVID-19 vaccine safety surveillance. Tasmania and Victoria will commence participation soon.

Annexure B —2020 Influenza data

Influenza vaccine safety surveillance 2020

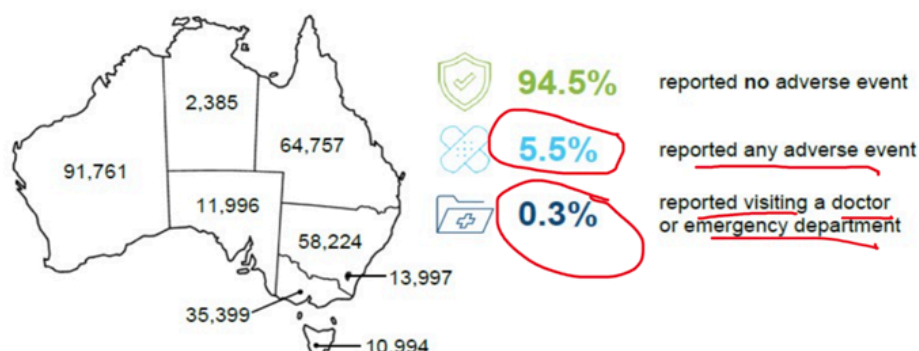

AusVaxSafety has commenced routine monitoring of the safety of 2020 seasonal influenza vaccines in all ages as at 30 March. Influenza vaccine safety results are updated weekly on this page.

AusVaxSafety has monitored the safety of influenza vaccines administered to Australians of all ages since 2017. Since then, over 477,000 individuals or parent/carer have provided details about any adverse events experienced after influenza vaccination and no safety signals have been identified.

As at 04/09/2020

NO SAFETY SIGNAL DETECTED

289,513 participants Australia wide

Annexure H - AstraZeneca Dose 1 - 28 March 2021

COVID-19 Vaccine AstraZeneca - Dose 1

Last updated 31/03/2021

31,786 people responded to an SMS/email about their health in the three days after their COVID-19 vaccinations.

32.7%
reported **no** adverse event

67.3%

reported any adverse event, including...

25.4%

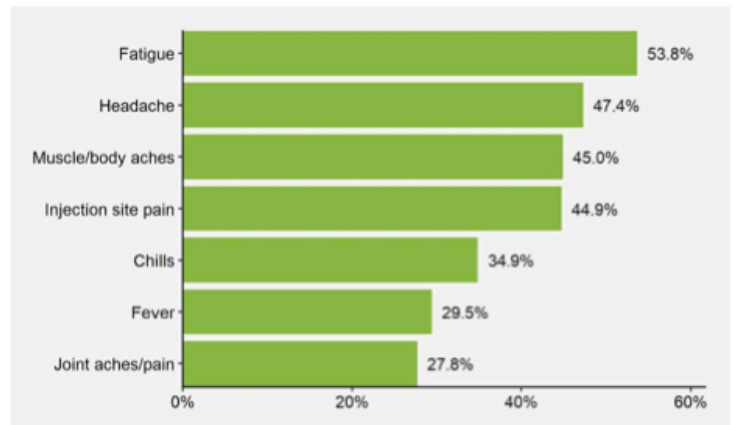

who reported missing work, study or routine duties for a short period (<1 day missed by the majority).

1.8%

who reported seeing a doctor or going to emergency department in the days after vaccination.

21,378 people reported one or more adverse events.

The most commonly reported were:

These symptoms are known to occur after vaccination. They are generally mild and short-lived. As with any adverse event reports, not all symptoms reported may be caused by the vaccine; **they may be coincidental and due to other causes**. Refer to [COVID-19 Vaccine AstraZeneca Product Information](#) on the TGA website for further details.
